a
Early adverse feedback (E01)
regret row is the sampling row rescaled
authentic sampling
normalized regret
(same estimand)
final-window
mask rate
interval spans zero
−0.05
0.00
0.05
rejected minus accepted
b
Information restoration (E01)
rejected stratum; higher is a larger reduction
2.5x
forced exploration
mask rate
counterfactual
mask rate
forced exploration
regret
counterfactual
regret
0.0
0.1
reduction relative to baseline
c
Boundary shift (E01)
environment fixed; p_λ^* is exact
learner favours authenticity
$\lambda = 2.5$
mask 0.992
objective boundary 43/60
tested environment $p = .65$
$\lambda = 0.5$
mask 0.589
$\lambda = 1$
acceptance probability p
