a
Every boundary the cascade computes
M0 acceptance p
learner weighting λ
displacement 0.203
0.717
M2 acceptance p
persistent state, η 0 to .8
displacement 0.448
0.471
M3 comparison cost b_f
learned modal response
displacement 0.158
0.2
0.3
0.4
0.5
0.6
0.7
0.8
0.9
boundary location on each model's own axis
environmental boundary
objective boundary moves (dynamic value)
comparison boundary moves (learner side)
b
Candidate leverage
magnitudes only; estimands differ
counterfactual feedback
(E01, mask rate)
forced exploration
(E01, mask rate)
proportional receptivity
(E04 hier., K slope)
proportional receptivity
(E04 flat, K slope)
0.00
0.05
0.10
0.15
absolute change in endpoint behaviour
